DETAILED ACTION

This is a response to the response of the election/restriction filed 6/2/2004. Applicant has elected species A, claims 1-4 readable on figure 2 for examination. The non-elected claims 5-10 have been withdrawn from consideration.

Election/Restrictions

Applicant's election with traverse of claims 1-4 in the reply filed on 6/2/2004 is acknowledged. The traversal is on the ground(s) that all species are not independent and distinct. This is not found persuasive because first of all, the search for one species is different from the search of the other species. Secondly, should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Kaneyama (USP 4,985,703).

Art Unit: 2816

Figure 3 of Kaneyama shows a CMOS analog multiplexer circuit comprising multiple series n channel/p channel MOS transistor input switches (Q101, Q104; Q106, Q109), multiple series n channel/ p channel MOS transistor output switches (Q102, Q105; Q107, Q110), multiple pull down n channel MOS transistor switches (Q103, Q108), said circuit prevents cross signal feed through from unselected inputs shunting said feed through to circuit ground as called for in claims 1-2.

The limitations of claims 3 and 4 are seen to be inherently present in Kaneyama.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
